P T0: Quick links Under $1000 $1,000 - $2,000 $2,000+ UK deals GPU hierarchy

2 Newsletter

If you're seeking the ultimate PC gaming experience without needlessly breaking the bank, these gaming PC deals could be precisely what you need. We've spent years tracking down the best prebuilt systems for the best prices, and we think that service is vital now more than ever.

Because PC gaming is in a bad way right now due to rising memory and storage costs, and as my nonna used to say, every penny saved is a penny earned. We've scrutinized the newest systems on sale this week, allowing you to make informed decisions about where to invest your hard-earned money. Sometimes that's a genuinely great price, or as is often the case today, the cheapest we've found for a given system and graphics card.

- **Join us on WhatsApp for daily deals, direct to your phone.**

Our gaming setups are categorized into three tiers: you've got budget picks, around $1,000 or less; mid-range machines that'll be suitable for most gamers, sitting around $1,000 – $2,000; and high-end machines from $2,000+, though don't expect an RTX 5090 without paying a lot more than that for it.

GAMING PC DEALS — QUICK LINKS

- **Newegg** - The best savings on gaming PCs
- **Amazon** - Save on Nvidia RTX gaming PCs
- **Best Buy** - Big savings on some beefy gaming PCs
- **Dell** - Alienware Aurora desktop PCs

UNDER $1000

SAVE US$220

Yawyore Gaming PC | Ryzen 5 5600GT:
~~was US$819.99~~ **now US$599.99 at Newegg**

The integrated graphics on this processor won't get you gaming at higher resolutions or higher settings in modern games, but it's a great way to get into some light 1080p gaming. This gaming PC mainly acts to get you up and running, and you can then upgrade with a (relatively low-power) discrete GPU down the line, though bear in mind if you want the latest and greatest specs, including processor and RAM Read more ▼

VIEW DEAL

SAVE US$235.99

ABS Cyclone Aqua | RTX 5060 | 16 GB DDR4:
~~was US$1,199.99~~ **now US$964 at Walmart**

Don't expect to have a good time doing any intensive productivity tasks, but when it comes to entry-level gaming at 1080p or even 1440p

with settings lowered, it'll do just fine thanks to the RTX 5060. Just bear in mind there's little room for upgrading the CPU and RAM down the line, as it's an older platform with DDR4.

Key specs: Core 5 120 | RTX 5060 | 16 GB DDR4 | 1 TB SSD

VIEW DEAL

$1,000 - $2,000

SAVE US$250

Stormcraft Viper | RTX 5060 Ti 8 GB | 16 GB DDR4: ~~was US$1,399.99~~ **now US$1,149.99 at Newegg**

There is a caveat to this one, which is that it's running just 16 GB of DDR4 RAM, and judging by the picture, it's just a single stick. However, you're getting an RTX 5060 Ti in here for not too far north of $1,000, which is better than I've seen at this price point for quite some time. A future RAM upgrade will be in order, but for starters this is great.

Key specs: Core i5 14400F | RTX 5060 Ti 8 GB | 16 GB DDR4-3200 | 1 TB SSD

VIEW DEAL

Andromeda Insights AMD Spectra | RX 9070 XT | 16 GB DDR5: US$1,799.99 at Newegg

It's wonderful to see a gaming PC with such a high-end GPU going for this kind of price. Even for pre-memory shortage prices this would be a good deal, but in 2026 it's fantastic. You're only getting 16 GB of RAM, but this will be a perfect

platform for an upgrade, too—perhaps to a new X3D chip and 32 GB of DDR5, if you can stomach the memory cost.

Key specs: Ryzen 5 9600X | RX 9070 XT | 16 GB DDR5-6000 | 1 TB SSD

VIEW DEAL

SAVE US$300

Skytech Gaming O11 | RX 9070 XT: ~~was US$2,199.99~~ **now US$1,899.99 at Newegg**

RX 9070 XT gaming PCs below the $2,000 mark are the ones to keep your eyes peeled for in the current market. They're kind of a last bastion of high-end builds for reasonable prices during the memory shortage. This one only has 16 GB of DDR5 RAM, but for gaming it'll do very well if you keep background apps closed.

Key specs: Ryzen 7 7700X | RX 9070 XT | 16 GB DDR5-6000 | 1 TB SSD

VIEW DEAL

$2,000+

SAVE US$250

iBuyPower Trace | RX 9070 XT | 9800X3D: ~~was US$2,499.99~~ **now US$2,249.99 at Best Buy**

This line-up of specs is music to my, erm, eyes, and it will be to anyone else who doesn't mind opting for an AMD GPU rather than an Nvidia one. The best CPU for gaming paired with an RX 9070 XT is a fierce combo, and you're getting

plenty of RAM and storage to boot. All for not too far north of $2,000.

Key specs: Ryzen 7 9800X3D | RX 9070 XT | 32 GB DDR5-5200 | 2 TB SSD

VIEW DEAL

SAVE US$550

Acer Predator Orion | RTX 5070 Ti | 265KF: ~~was US$2,899.99~~ **now US$2,349.99 at Best Buy**

You can find a similar RX 9070 XT gaming PC for cheaper than this, so if you don't mind AMD it'd be better opting for that. But if you want an RTX 5070 Ti, this is a great all-round build for it, with a decent CPU and plenty of RAM. You might want to throw in another terabyte of storage down the line, though.

Key specs: Core Ultra 7 265KF | RTX 5070 Ti | 32 GB DDR5 | 1 TB SSD

VIEW DEAL

Andromeda Insights V3 Elite AMD | RX 9070 XT | 9800X3D: US$2,449.99 at Newegg

This is a fantastic high-end PC, provided you're fine opting for AMD over Nvidia. The best gaming CPU paired with AMD's best GPU offering, and with 32 GB of fast RAM and 2 TB of storage to boot. Just solid, all around.

Key specs: Ryzen 7 9800X3D | RX 9070 XT | 32 GB DDR5-6000 | 2 TB SSD

VIEW DEAL

SAVE US$450

ABS Stratos II Aqua | RTX 5070 Ti: ~~was US$2,999.99~~ **now US$2,549.99 at Newegg**

Unless you're willing to push your budget up for an RTX 5080 rig, this is about as high-end as you'll get. And it's no slouch in any department, as that CPU and RAM combo should make this PC great a productivity tasks in addition to gaming.

Key specs: Core i9 14900KF | RTX 5070 Ti | 32 GB DDR5-6000 | 2 TB SSD

VIEW DEAL

SAVE US$1,150

Alienware Aurora | RTX 5070 Ti: ~~was US$3,849.99~~ **now US$2,699.99 at Newegg**

You're definitely paying the Alienware tax for this one, even with a discount, and that won't be for everyone. But if you're keen on the Alienware aesthetic, this is a great high-end build for it.

Key specs: Core Ultra 9 285 | RTX 5070 Ti | 32 GB DDR5 | 1 TB SSD

VIEW DEAL

SAVE US$200

Stormcraft Phantom | RTX 5080 | 265F: ~~was US$2,999.99~~ **now US$2,799.99 at Newegg**

Okay, there's some pretty slow RAM in this build, but for this price in the current market I'm not complaining. I didn't think I'd see any RTX 5080 build like this one at such a price again, but lo and behold, Stormcraft has other ideas.

This rig should handle any game, even at 4K. It's a true high-end deal.

Key specs: Core Ultra 7 265F | RTX 5080 | 32 GB DDR5-4800 | 2 TB SSD

VIEW DEAL

SAVE US$400

iBuyPower Gaming PC | RTX 5080 | 270K Plus: ~~was US$3,399.99~~ **now US$2,999.99 at Newegg**

$3,000+ is about par for the course now, with RTX 5080 rigs, so if you're going to spend this much you might as well get the whole hog. This is certainly that, as in addition to that GPU, it also has a 270K Plus CPU, which we scored very highly in our review and is Intel's best desktop processor. The 32 GB of RAM and 2 TB storage is just the icing on top.

Key specs: Core Ultra 7 270K Plus | RTX 5080 | 32 GB DDR5-5200 | 2 TB SSD

VIEW DEAL

SAVE US$200

Gigabyte Aorus Prime 5 | RTX 5080 | 9800X3D: ~~was US$3,499.99~~ **now US$3,299.99 at Newegg**

You might find an RTX 5080 rig for a little cheaper than this, but I'd challenge you to find one with the whole caboodle of fast DDR5 RAM, plenty of storage, and the best CPU for gaming on the market. This is as high-end as you can get without almost doubling your budget for an RTX 5090 rig.

Key specs: Ryzen 7 9800X3D | RTX 5080 | 32 GB DDR5-5600 | 2 TB SSD

VIEW DEAL

SAVE US$300

Stormcraft Phantom | RTX 5080 | 270K Plus: ~~was US$3,599.99~~ **now US$3,299.99 at Newegg**

The specs on this one pretty much speak for themselves. What more could you ask for? Not much, really, unless you're willing to practically double the cost for an RTX 5090 rig. Here you're getting one of the best CPUs for gaming on the market, an RTX 5080, and plenty of RAM and storage, all during during a global memory shortage.

Key specs: Core Ultra 7 270K Plus | RTX 5080 | 32 GB DDR5-6000 | 2 TB SSD

VIEW DEAL

CCL Horizon | RTX 5070: **£1,579.99 at CCL**

You're not getting the best CPU here, but for gaming it should do fine, especially with that RAM being dual-channel. The main allure here is getting an RTX 5070 in your build for this cheap of a price. If you're looking for a mid-range build for as cheap as possible, this one is worth considering.

Key specs: Ryzen 5 8400F | RTX 5070 | 16 GB DDR5 | 1 TB SSD

VIEW DEAL

SAVE £150

CyberPowerPC Ultra 57 D457 | RX 9070 XT: ~~was £1,849~~ **now £1,699 at CyberPowerPC**

This might only be packing an older CPU and 16 GB of previous-gen RAM, but it's all worth it for that RX 9070 XT. Getting one of those GPUs in your rig for this price is a steal, and the other components shouldn't bottleneck too much while gaming, provided you close background apps and play mostly GPU-intensive rather than CPU-intensive games.

Key specs: Ryzen 7 5700X | RX 9070 XT | 16 GB DDR4-3200 | 1 TB SSD

VIEW DEAL

SAVE £210

AWD-IT Frame 4000D | RX 9070 XT: ~~was £2,079.97~~ **now £1,869.97 at awd-it.co.uk**

This all-AMD gaming PC is about as cheap as you'll get for some bona fide high-end gameplay these days. You are having to settle for just 1 TB of storage and not the highest-end CPU, but it's still a more than capable rig, even for 4K gaming in most games. Just make sure you **configure the build to match the specs below** and price listed here.

Key specs: Ryzen 5 9600X | RX 9070 XT | 32 GB DDR5-6000 | 1 TB SSD (Kingston ver.)

VIEW DEAL

Scan Performance RTX | RTX 5070 Ti: £2,349.98 at Scan

This might actually be the best shout for a high-end gaming PC right now. Of course the RTX 5070 Ti is fantastic, as is 32 GB of fast RAM during a memory shortage. But that CPU is a thing of beauty, too. The refreshed Arrow Lake chip performs about as well as a lower-end X3D chip (which means pretty damn well) but also happens to do incredibly well at productivity and other CPU-intensive tasks, maki Read more ▼

VIEW DEAL

Chillblast Helios | RX 9070 XT: £2,699.99 at Chillblast

If you're happy opting for an AMD rather than an Nvidia GPU, this is about as well-rounded of a high-end rig for such a low price as you can get right now. The best CPU on the market, paired with AMD's best GPU, plus a whole heap of memory and storage during a global memory shortage. Lovely.

Key specs: Ryzen 7 9800X3D | RX 9070 XT | 32 GB DDR5-5200 | 2 TB SSD

VIEW DEAL

Scan Performance RTX | RTX 5080: £2,699.99 at Scan

If you're gonna go for a high-end RTX 5080 rig, you also want the CPU to match, and that's what you're getting here. Sure, it's not a *current*-gen X3D chip, but an X3D chip it is nonetheless, and that means some fantastic gaming performance. There'll be little worry of significant bottlenecks from either the CPU or

GPU here, even in the latest demanding games at very high settings.

Key specs: Ryzen 7 7800X3D | RTX 5080 | 32 GB DDR5-6000 | 1 TB SSD

GRAPHICS CARD HIERARCHY

The most important component for any gaming PC build will always be the graphics card. That will give you the best idea about how one machine matches up with another just in terms of raw gaming performance.

Below, we've listed the slew of GPUs we've had over the past couple of years listed in terms of their Time Spy Extreme index score as a way to put them in some consistent hierarchy.

Five things I always tell people before they buy a new gaming PC
by Jacob Fox, Hardware writer

1. Start by choosing a graphics card

2. Ideally get 32 GB of DDR5 RAM, but 16 GB is fine on a tight budget

3. Make sure it has an NVMe SSD with 1 TB capacity, preferably 2 TB

4. Consider your CPU's general performance and socket upgradeability

5. Remember you can always upgrade later, but it might cost more

Should I build my own gaming PC or buy a prebuilt?

One of the biggest advantages of putting together your own budget gaming PC build is the ability to choose every single component in the system. This allows you to shop around for deals and find the perfect combination of parts to fit your budget and performance needs. The downside for most inexperienced builders is that this whole process can take some time and has the potential to cause quite a headache if something goes wrong. This is where prebuilt gaming PCs really shine.

When you pay the premium to configure or purchase a prebuilt PC, you pay for more than just the parts. You are paying for warranty service, support, and the peace of mind that professionals put your system together. These are some of the things we value highly when considering the best budget gaming PCs. We also look at other unique selling points like design, upgradability, and anything you couldn't do when building it yourself.

Now that graphics cards are regularly available and the silicon shortage is starting to clear up, building your own PC is much easier than it was before. A prebuilt rig is still a reliable way to get your desired graphics card.

For most users who don't have the luxury of spending over $1000 on a prebuilt gaming PC, upgradability and performance per dollar are paramount. When we decided to choose our top choices for budget prebuilt gaming PCs, we looked at almost every major manufacturer and system integrator to find the best combination of value, reliability, customer feedback, design, and performance under $500 and under $1,000.

We still highly recommend the experience of building it yourself, but if you can't do that, one of the systems above will have you gaming in short order.

What is a decent price for a gaming PC?

The $1,000 - $1,500 mark is probably around the sweet spot for a new gaming PC. That will get you a graphics card that can nail 1440p at solid frame rates and a really good supporting spec. That should mean a relatively sizeable NVMe SSD, around 500GB, as well as 16GB of speedy memory and a modern CPU.

Is PC gaming better than console?

Unquestionably. In real terms, it's more expensive in terms of hardware, but there is a games library stretching back decades that no other gaming platform can possibly match. Games are also regularly cheaper or free on PC, too.

The PC is also more capable of doing more things than a games console, too. Try browsing the web on your PlayStation, and you'll know what we mean. It can also be portable, in either laptop or Steam Deck style.

What PC is equivalent to a PS5?

We suggest that the AMD RX 6700 GPU will deliver around the same level of raw graphics performance as Sony's PS5. That's an OEM part, so you'll only find it in a prebuilt gaming PC, but it's an 11.3 TFLOP GPU versus the 10.3 TFLOP of the PS5.

Those numbers aren't wholly comparative, but you would also need an 8-core CPU, 16GB of memory (though the PS5's is spread between GPU and system), and a 500GB+ SSD.
