One of the most important compatibility points is RAM type. Some motherboards support DDR4, while others support DDR5. You cannot install DDR4 RAM in a DDR5 motherboard or the opposite.

If you already have DDR4 RAM and want to save money, choose a DDR4 board. If you want a newer and more future-ready build, DDR5 is better, but it usually costs more.

RAM Type	Best For	Notes
DDR4	Budget and mid-range builds	Better price
DDR5	Modern and upgrade-friendly builds	Higher spee choice

MOTHERBOARD SIZE: ATX, MATX, OR MINI-ITX
